

Talaria TWO - Exceptionally Low Power IoT Wi-Fi

A Game Changer for IoT 2023

Deepal Mehta

Sr. Director, Business Development

InnoPhase IoT Company Overview

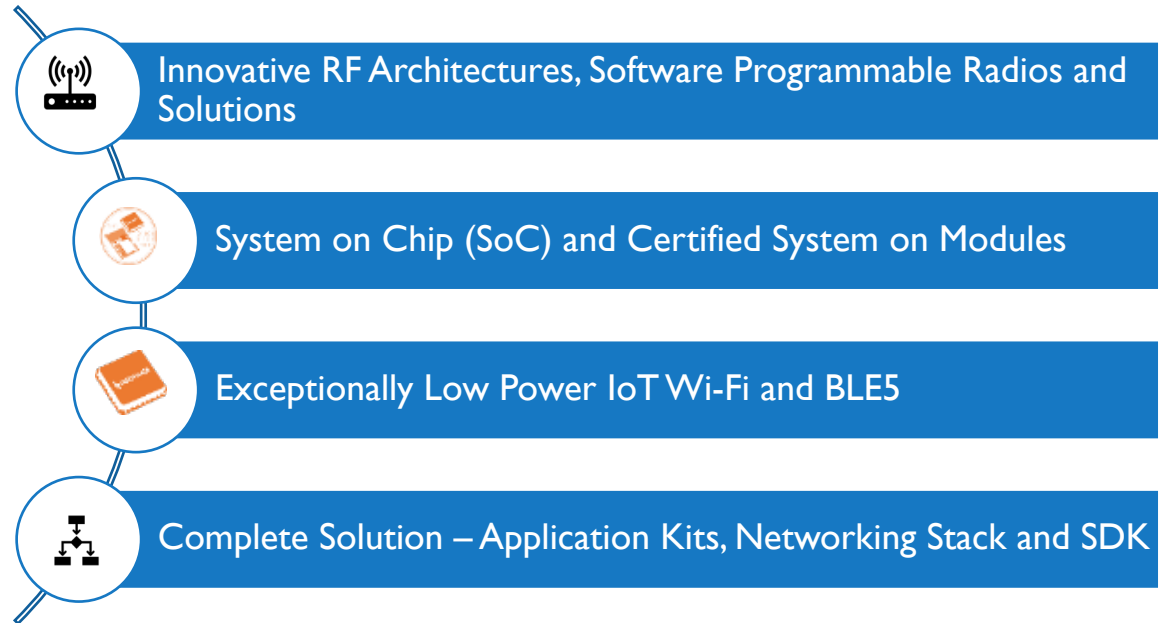

Company at-a-Glance

- Privately held, Venture-backed
- Incorporated in 2022
- Established as an Extreme Low Power Smart Wireless Platform Company
- ~ 100 Employees

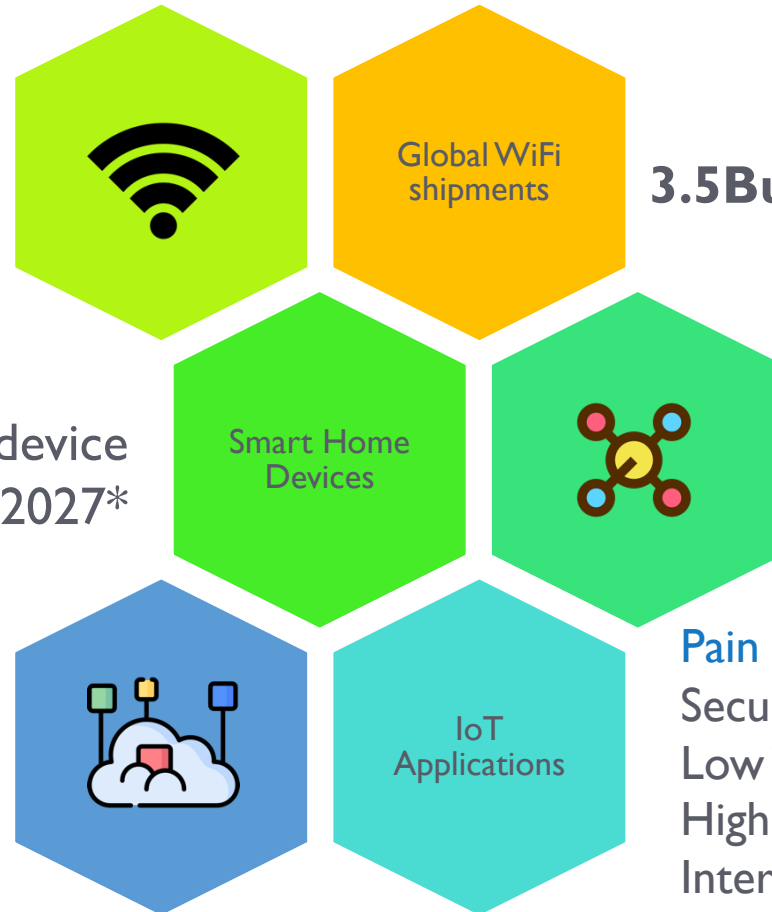

R&D Offices

- San Jose, California (HQ)
- San Diego, California
- Kista, Sweden
- Bangalore, India

Ubiquitous WiFi for IoT connectivity

3.5Bu (2021) to 5.2Bu (2026)*

50% of connected Smart Home device shipments to be IP-based by 2027*

Pain Points:

- Secure & Low-Power Solution
- Low Throughput for Everyday Operations & High Throughput for FOTA
- Intermediate Gateway Cost

Talaria TWO Ultra Low Power (ULP) WiFi

Battery Life: **10 years**

Low-to-High Throughput: **30 Mbps Peak Tput**

Gateway: **Zero cost**

Target IoT Applications

Smart Home

Video Camera/doorbell, Door Lock, Garage door opener, Glass break sensor, Human audio sensors

Commercial Building

Door locks/access control, Building management and sensors, Air quality monitoring

Smart Retail

POS terminals, Shelf monitoring, Customer traffic monitoring, Commercial refrigeration

Industrial IoT

Machine monitoring – vibration & audio sensors, Predictive Maintenance, Asset Tracking

Smart Healthcare

Patient tracking & monitoring, Asset tracking, Secure & connected equipment

Pet & People Tracking

Geo-fencing

Battery Operated IoT Market Needs

ULP Wi-Fi at BLE power levels

- Always ON, always connected, higher bandwidth video & audio use cases
- Year long battery operated IoT solutions & smaller battery size

Direct-to-cloud connectivity

- Ubiquitous Wi-Fi connectivity at home, commercial building & industrial markets
- No intermediate gateway required for IoT applications

Multi-protocol wireless solutions

- Integrated Wi-Fi, BLE & Thread for new applications

Based on PolarFusion™ Digital radio architecture, Talaria platform brings an integrated, ultra-low-power wireless solution that enables battery operated, high-bandwidth solutions

InnoPhase Offerings – Talaria TWO

INP2045 SoC

- 802.11b/g/n and BLE5LR
- Exceptional low power Wi-Fi
- Advanced security
- Full networking software stack
- Cloud ready
- GCC/Eclipse based SDK

System on Modules

- Fully certified modules for rapid product development
- Castellated and LGA Mini-Modules with different antenna configurations
- Self-hosted and hosted configurations

Talaria TWO™ Wi-Fi & BLE Module: Benefits

Ultra Low Power Wi-Fi

- **10+ years** battery life for sensors, 1+ year for video camera
- Industry's lowest Wi-Fi Transmit current (**81mA@12.5dBm**), 50% reduction to Tx & Polling Current
- System Level Low Power Optimizations: RF technology, Silicon, platform SW, programmable API and Smart Wi-Fi scanner

Lower Systems TCO

- Direct-to-cloud connectivity. **No intermediate gateway** required
- Self-Hosted (no MPU required)
- Integrated Wi-Fi/BLE for easy device provisioning
- Secure connection to cloud, Secure Boot & FOTA
- Ubiquitous and Interoperable Wi-Fi eco-system

Reduce Time-To-Market

- **WW Regulatory Certified Wi-Fi & BLE SoC and Modules in Production**
- Integrated software and Market Ready Solution with ISPs (Ambarella, Ingenic), MCUs (STM, Nuvoton) and Cloud support (Azure, AWS certified)
- Global Sales support: FAEs, Distributors, ODMs, Design houses

Scalable Performance & Features

- Low power enables intelligence on device without sacrificing battery life
- Robust Network Throughput under noisy environments, Up to **2K** camera resolution capable
- High performance lossless audio use-case
- High throughput FOTA update
- Matter * protocol support for Smart Home eco-system

Go-To-Market Strategy

Untethered IoT Devices with Battery Life that Extends to Device Life

Leverage strategic partnerships to expand markets

- Companion ICs
- MCUs
- ISPs
- ULP Sensors
- Cloud Platforms

Reference solution kits for rapid prototyping

- Battery-Powered Camera
- Low-Power IoT Sensors

Certified IoT products

- Wi-Fi & BLE Compliance
- Global Regulatory
- Cloud Connectivity
- Matter for Smart Home

Reduce TTM with production ready solutions

- ODMs / OEMs
- IDHs

Talaria TWO Evaluation Kits

- EVB-A Part #s: INP3010 to INP3015
 - Standalone and 3.3V Arduino Shield compatible
 - PCB, ceramic and u.fl external antenna versions
 - Integrated low power sensors **including Bosch Pressure Sensor**
- Evaluation support/binaries
 - Multi-purpose demos for quick use-case evaluation
 - Scan, Throughput and latency testing
- Development support
 - Plenty of example applications with full source code FOTA, Provisioning, peripherals, AWS/Azure cloud etc.
 - Comprehensive AT commands support
 - GCC based development environment with comprehensive documentation
- Download demo & example applications from InnoPhase IoT website for free

Distributed by Mouser and Richardson-RFPD

InnoPhase Low Power Sensor ADK

Nuvoton M252 + Talaria 2

- Small form factor
- Supports constant monitoring of sensors
- Short Interval Sensors – always connected
 - Maintains AP connection through use of Keep Alives
 - Constant Cloud Connection
- Supports long interval monitoring of “sleeping sensors”
 - System awoken by clock, keypad, sensor inputs
 - MCU sleeps between postings for additional power savings
- Rapid integration of new customer sensors (Grove I2C Connection)
- Integrated PIR Motion Sensor, VOC gas sensor
- HTTP/s Post/Get, MQTT Publisher/Subscriber
- WPA2, WPA3 Wi-Fi and TLS 1.2 application security
- Directly connected to internet via existing home or enterprise router, unlike BLE or Sub-GHz technologies
- Wi-Fi provisioning through BLE, Android app supplied
- FOTA and factory loader capabilities
- AWS and Azure certified

Eoxys Xeno+ Wi-Fi & BLE Nano ML Module

- Battery-powered Wi-Fi + BLE5.0 IoT devices
- Talaria TWO INP1014 module w/ PCB antenna
- Nuvoton M2354 & Keil IDE Software SDK

Eoxys' Xeno+™ Nano ML Module Includes
InnoPhase IoT's Talaria TWO™ Low Power
WiFi plus BLE5.0 Module and Nuvoton's
NuMicro® M2354 MCU

Ingenic T31 + Talaria TWO Video Market Ready Solution

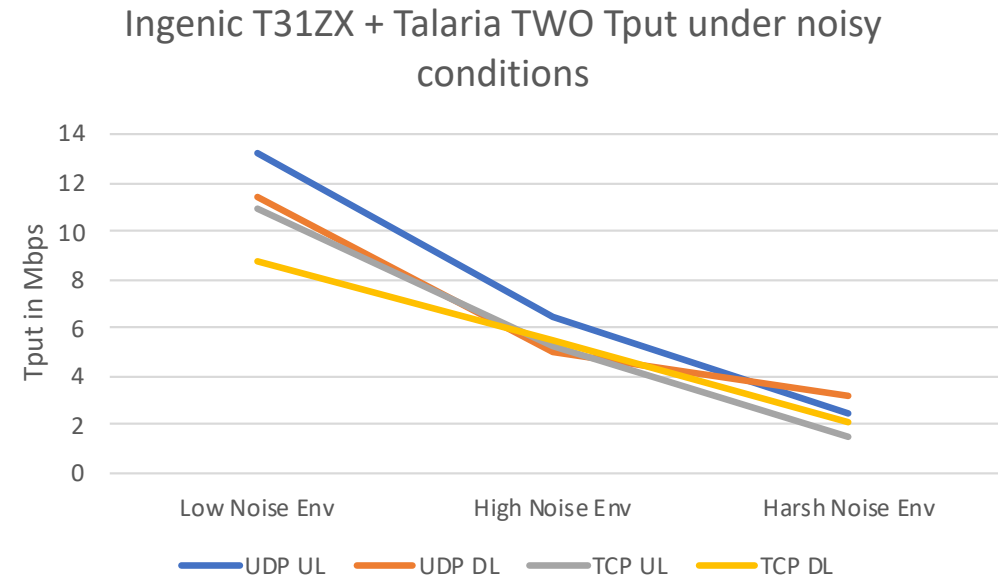

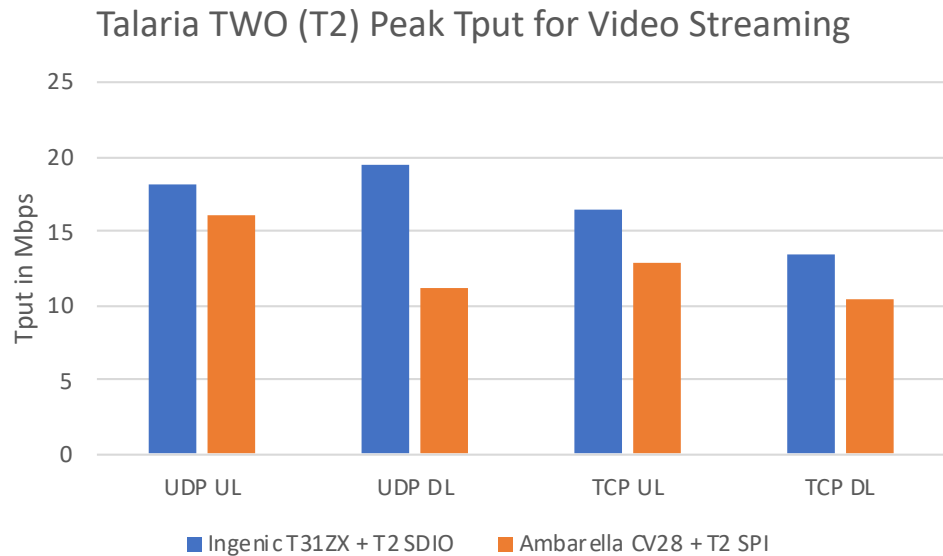

InnoPhase IoT Low-Power Wi-Fi Video Camera Reference Kit w/ Talaria TWO™ INP1014 Module

Throughput Optimized for Video Streaming

- Up to 2K resolution camera applications
- Consistent performance in noisy environments
- Linux host interface via SDIO & SPI

Maximize Battery Life Performance

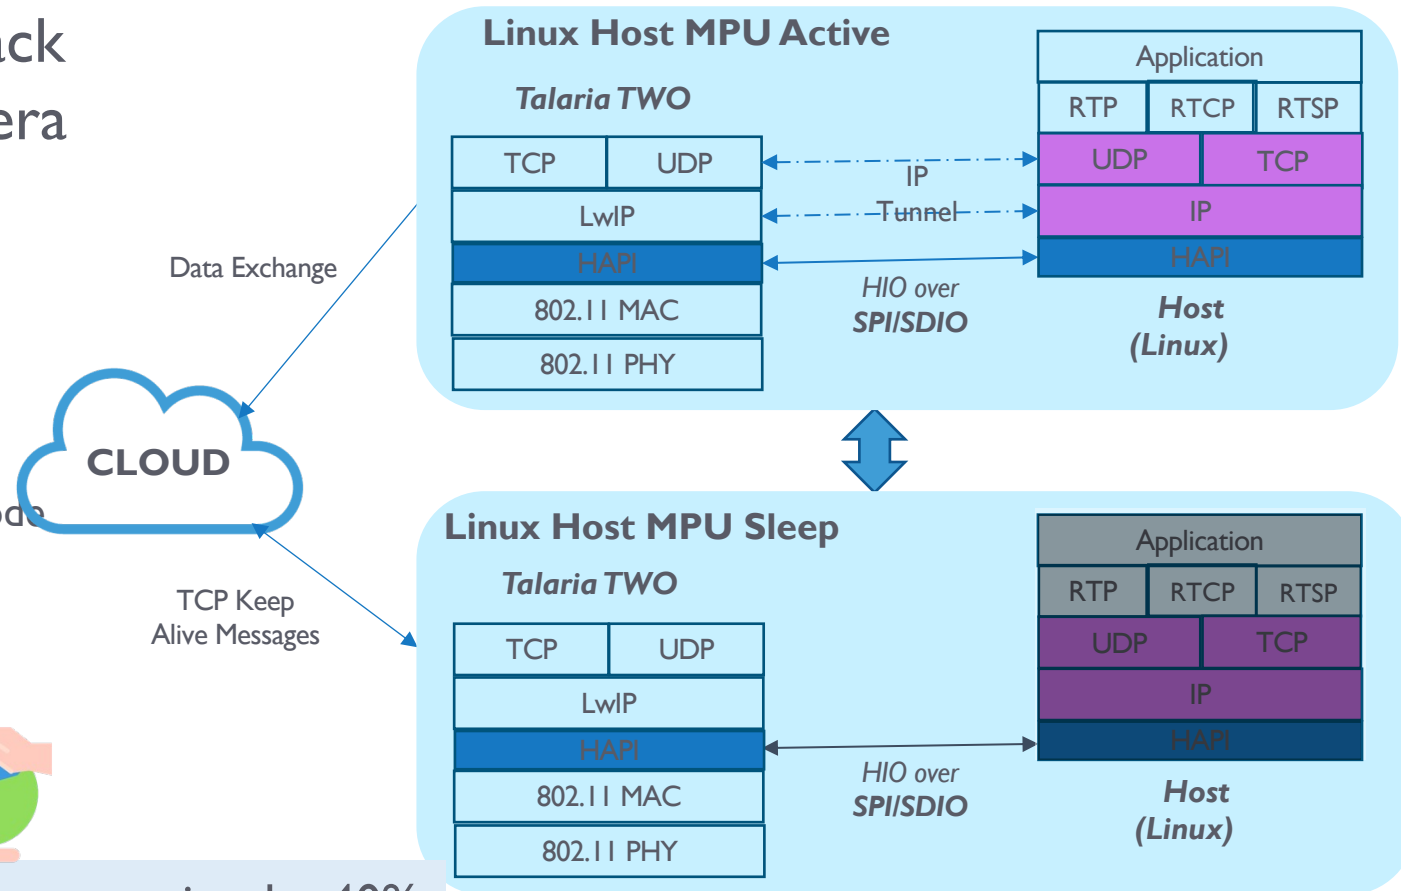

Build Video Solutions with **1+ year*** Battery Life

Custom Designed and Patented Dual-Stack Implementation for Wireless Video Camera

- Talaria TWO takes over the battery-consuming task:
 - maintaining real-time connectivity with Cloud and App
 - monitoring event trigger sensors
- Allows power hungry Linux Host MPU to enter sleep mode and greatly improves battery life performance
- Wireless video integration for the following MPUs:
 - Ambarella CV28
 - Ingenic T31X/ZX
 - Omnivision 8000

Further reduces current consumption by 40% & extends battery life

* 3000mAh battery capacity

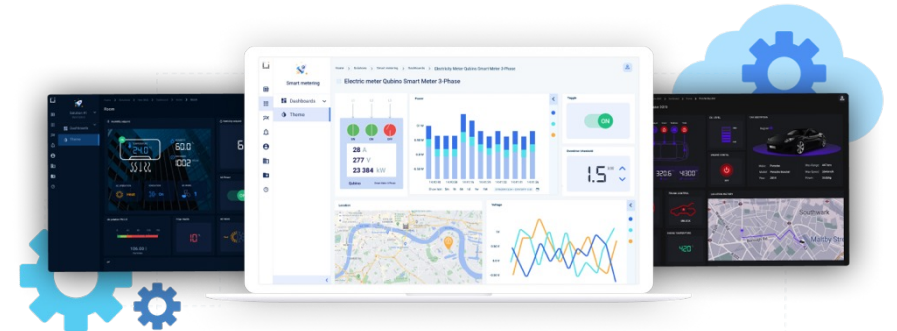

Talaria TWO enabled E2E Multi-year Battery Operated Sensor solution

Device also sends out router association keep-alive, typically every 1-5min

Battery Powered Sensor

- Direct connectivity to cloud via router, no gateway with BLE/subGHz required
- Periodic sampling polling and/or posting of sensor data - Low duty cycle, time and/or event-based posting
- Smart sensor event wakeup
- Always connected – Talaria TWO optimizes power consumption and maintains both router and cloud connection
- Battery powered Web Client (HTTP/s) or MQTT Publisher
- WPA2, WPA3 Wi-Fi and TLS 1.2 application security
- Bandwidth to handle video, audio and FOTA updates
- Device maintains router association/connection (keep alive)

Analytics, Alerts & Device Management

Remote Device Management & Service

- Command and control
- Device status/health
- Location management
- Over the air firmware update management
- Home or building automation

Talaria TWO: Software Support

Self-Hosted and Hosted Configurations

SENSOR APPLICATION

T2 SDK

Self-Hosted

- Application, networking and wireless (BLE/Wi-Fi) functionality on Talaria TWO
- Reference applications and services minimizes development effort
- 11 GPIO and 10bit A/D available for peripheral interface

MCU Host Package

Hosted-MCU

- Talaria TWO offers Wi-Fi, BLE networking, cloud connectivity, MCU runs application and extends peripheral connectivity
- Talaria TWO wakes up host MCU on Rx (cloud, remote device mgmt., Alexa Ready)
- UART (2W/4W), SDIO and SPI interface
- Wi-Fi/BLE C library (HAPI) host package or AT Commands (native on Talaria TWO)
- Easy to port to different MCU's, host RTOS independent

VIDEO CAMERA APPLICATION

Embedded Linux Host Package

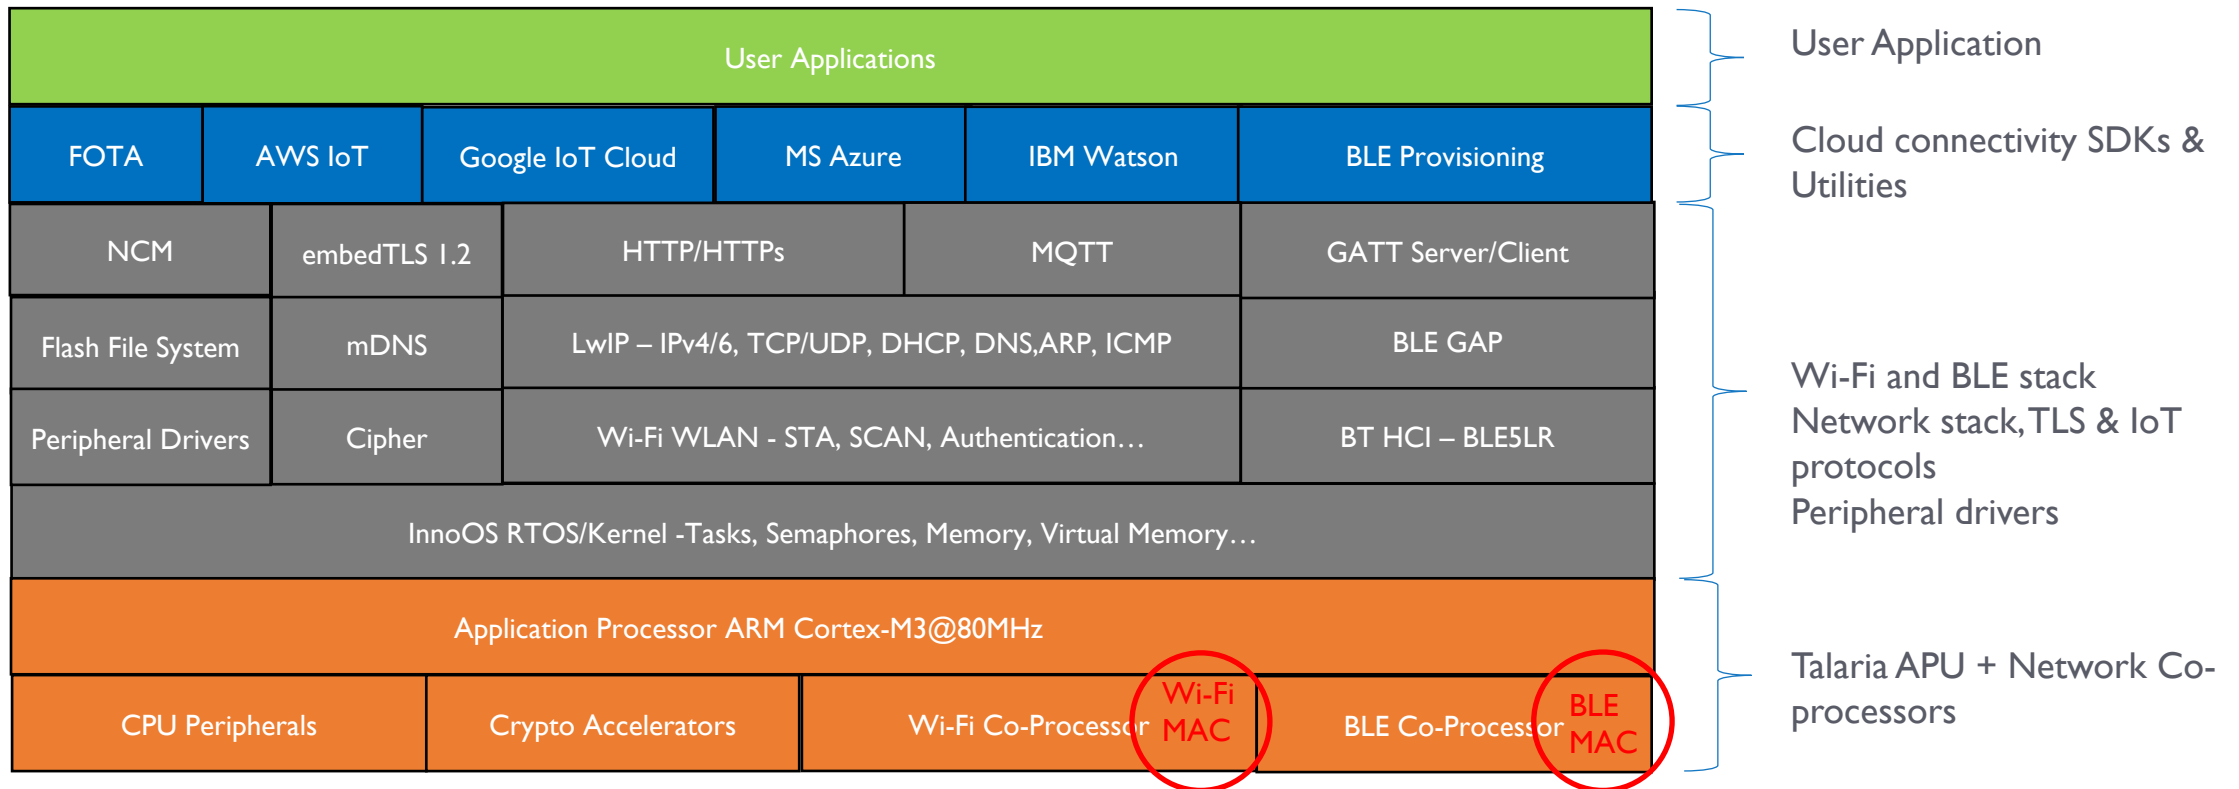

Hosted-MPU

- Unique Low Power, dual stack architecture
- Linux host for data application, and T2 for networking stack and low power/sleep application
- UART (2W/4W), SDIO and SPI interface
- Wi-Fi/BLE User Space C library (HAPI) host package
- Easy to port to different CPU's and Linux Kernel versions

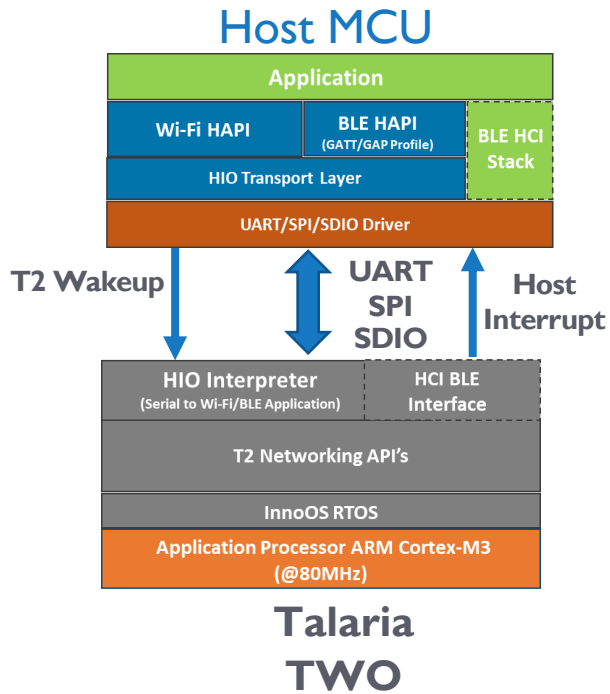

Talaria TWO SDK

- Complete software solution with certified Wi-Fi and BLE stack, networking stack, and integrated cloud connectivity SDK
- GCC toolchain and eclipse-based IDE for software development
- Reference applications for rapid prototyping and development

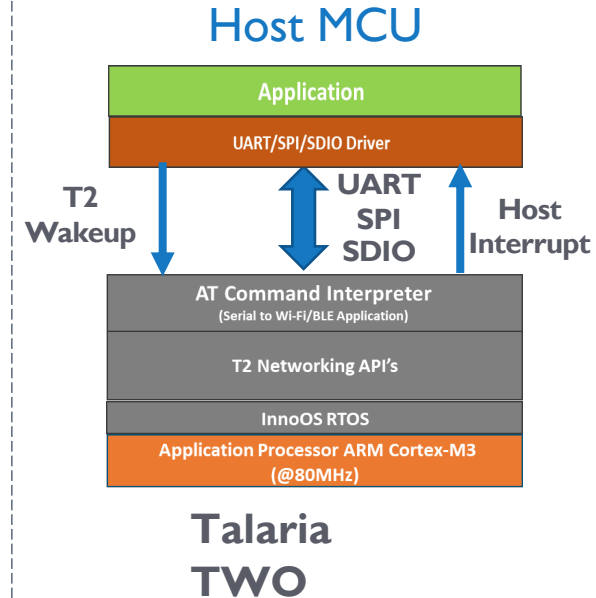

Hosted MCU SDK

Host 'c' Library (HAPI)

- Wi-Fi and BLE supported
- Remote procedure call library
- Host/Talaria TWO communication is via binary messaging (HIO)
- BLE HCI interface also supported
- Optional scrambled host communications
- UART supports wakeup on Rx
- Talaria TWO secure boot and secure vault options

Native AT Commands

- Wi-Fi and BLE supported
- Host Talaria TWO communication via ASCII messaging
- Simple host "driver"
- AT Commands are native on Talaria TWO
- UART supports wakeup on Rx
- Talaria TWO secure boot and secure vault options

- Talaria TWO provides Wi-Fi & BLE connectivity and manages cloud connectivity
- Talaria TWO wakes up the Host MCU on Rx (cloud, remote device management, Alexa Ready...)
- Small, low power MCU can be used to extend peripheral connectivity to Talaria TWO
